

VRAJ PRAJAPATI

Software Engineer | Full-Stack Developer | MERN | Node.js | AWS

+91 9664860627 | prajapativraj147@gmail.com | [linkedin.com/in/vraj-prajapati](https://www.linkedin.com/in/vraj-prajapati) | github.com/vraj-prajapati

PROFESSIONAL SUMMARY

Full-Stack Software Engineer with 2 years of experience delivering production-grade web applications using Node.js, React.js, NestJS, PostgreSQL, and AWS. Shipped 3 end-to-end platforms — healthcare, e-commerce, and edtech — handling API design, database architecture, payment integrations, and cloud deployment. Comfortable owning features independently from requirements through deployment in Agile teams.

TECHNICAL SKILLS

- **Languages:** JavaScript (ES6+), TypeScript, Python, C/C++
- **Frontend:** React.js, Redux, HTML5, CSS3, Responsive Web Design
- **Backend:** Node.js, Express.js, NestJS, RESTful APIs, GraphQL
- **Databases:** PostgreSQL, MySQL, MongoDB, Query Optimization, Indexing
- **Cloud & DevOps:** AWS (EC2, S3), Docker, CI/CD Pipelines, Render, Vercel
- **Security & Auth:** JWT, OAuth2, AWS Cognito, RBAC, Role-Based Authorization
- **Tools & Process:** Git, GitHub, Agile/Scrum, Postman, VS Code, Code Review
- **Integrations:** Stripe, Payment Gateways, Webhooks, Background Job Queues

WORK EXPERIENCE

Software Engineer | **BACANCY Technologies**

Ahmedabad, Gujarat | Jan 2025 – Present

- Architected and shipped 3 production full-stack applications using the MERN stack, each supporting 5+ distinct user roles with separate permission levels and access control.
- Engineered 20+ RESTful API endpoints with JWT authentication and RBAC, cutting unauthorized access attempt.
- Spearheaded integration of Stripe payment gateway and webhook automation, processing subscription billing events and reducing manual payment handling by over 80%.
- Reduced average PostgreSQL query response time by 35% by redesigning table schemas, adding composite indexes, and eliminating N+1 query patterns across 4 core modules.
- Delivered sprint features on time across 6+ Agile sprints, conducting peer code reviews and maintaining test coverage on critical API modules.

PROJECTS

Lucidium World – Metaphysical Life-Simulation Platform | *MERN, NestJS, PostgreSQL, AWS*

- Launched a full-stack life-simulation platform with AI guidance, tarot, astrology, and gamified engagement supporting 6 user roles (admin, advisor, client, guest, moderator, AI trainer).
- Authored 40+ modular NestJS API endpoints with PostgreSQL, covering booking, scheduling, notifications, and subscription management across 8 feature modules.
- Configured timezone-aware appointment scheduling and real-time chat, decreasing booking conflict errors to near zero through server-side validation logic.
- Incorporated Stripe dynamic pricing, subscription tiers, and webhook event handling, supporting 3 plan types with automated upgrade/downgrade flows.
- Deployed on AWS EC2 and S3 with automated CI/CD pipelines, achieving 99.5% uptime across staging and production environments.

Mens – Healthcare Consultation Platform | *Node.js, NestJS, PostgreSQL, AWS, Stripe*

- Constructed a HIPAA-conscious backend for doctor-patient consultations handling encrypted chat, video calls, and digital prescriptions for 2 user types.
- Secured all patient data endpoints using JWT + RBAC, restricting 100% of sensitive medical records to authorized roles only.
- Automated Stripe subscription billing lifecycle — handling renewals, failures, cancellations, and post-approval order creation via webhook listeners.
- Streamlined third-party API integrations for appointment scheduling, SMS/email notifications, and pharmacy order fulfillment across 3 external providers.
- Established structured error handling and request logging, reducing average incident resolution time by providing full request traceability.

Snot – Pet Learning & Social Platform | *Node.js, GraphQL, React.js, AWS, Cognito*

- Designed a pet social platform with community feeds, short-form video reels, and stories, supporting 4 content types with moderation workflows.
- Formulated a Tree/BFS-based hierarchical course structure (Module → Session → Lesson) enabling trainers to manage 100+ lessons across nested learning paths.
- Configured AWS Cognito authentication with multi-role access control, onboarding pet owners, trainers, and AI trainer personas under one auth system.
- Shipped payments and revenue-sharing logic, real-time chat, and video calling features, covering the full monetization lifecycle from purchase to payout.
- Optimized GraphQL resolvers and data-loaders, reducing over-fetching by 60% and cutting average API response time from 420ms to 170ms.
- Migrated media storage and adaptive video streaming to AWS S3 with CloudFront CDN, supporting resume playback and per-user progress tracking.

EDUCATION

B.Tech in Computer Science and Engineering

CGPA: 9.33 / 10 | 2021 – 2025

Chandubhai S Patel Institute of Technology (CSPIT), Charusat University, Anand, Gujarat

Relevant Coursework: Data Structures & Algorithms, Operating Systems, Database Management Systems, Computer Networks, Object-Oriented Programming, Design & Analysis of Algorithms

Higher Secondary Education — Science

90.1% | 2021

Sardar Vallabhbhai Vidyalaya, Vadodara, Gujarat

CERTIFICATIONS

- NPTEL – Programming in Modern C++ | IIT Kharagpur
- NPTEL – Data Structures and Algorithms | IIT Kharagpur
